      <h2>EDUCATION</h2>
      <h3>initialState.educationAndTraining.futureproof2022_current</h3>
      <p>During the 3 months full-time training I have cemented my knowledge from the previous years of my training. I have a very strong understanding of JS, including React, SQL and NoSQL, NodeJS and other languages and frameworks I have previously known. I know how to build a Docker container and how to run an app in it. I also learned how to build a RESTful API in Flask as well as Django. Every 3 weeks I had a chance to work in a professional Agile team for a week, building a fullstack app from scratch, delivering the MVP in just 5 days. I learned the skill of pair coding, working in a fast paced, highly stressful environment.</p>

      <h2>WORK EXPERIENCE</h2>
      <h3>initialState.workExp.bcaLead2018_current</h3>
      <p> I was assisting the Head of Maths in planning and tracking learning of our students, enrolment to appropriate maths courses and representing the college in OFSTED and other inspections. As I was highly engaged in the enrolment process (which was manual, at that time), working closely with the MIS department I have developed an automated enrolment process that was very successful. After this, I have started working on an automated assessment tracking system and developed my own <b>WordPress theme</b> to highlight students' areas for improvement and track progress within topics.</p>

      <h2>PROFILE</h2>
      <p>I am a keen learner and am not afraid of starting new things and ideas. Within a year of coming to the UK I have learned sufficient English to be able to teach in this language. I like to get things done - problem solving is my second nature. When I noticed a problem at work, I created a solution that has been long used by many people in my office. I am a people's person. Just 2 years after starting my teaching career I have been promoted to a Team Leader position. My team describes me as helpful, proactive and funny. In my previous job I spent 7 years, as I like to put my heart into what I am doing. I fell in love with programming, hence why I want to pursue a career in this field.</p>
